LANGUAGES SUMMARY

- **ReactJS :** Redux store / context api - Materialize - Bootstrap - Responsive - css styling - Routing - user friendly - reusable components - highly maintainable - worked with a lot of packages - Forms
- **ExpressJS/nodeJS:** Middleware - http methods - Error handling - Scalable - Apis - Dynamic - Security
- **Yii2:** OOP - MVC pattern - Routing - Apis - Error handling - Security - Debugging - Dynamic Dashboards - User Friendly Admin Dashboards - Xampp

ABOUT ME

With a strong foundation in full-stack development, I have consistently excelled in web development, adeptly working with HTML, CSS, React.js, Express.js, and the Yii2 framework. My expertise extends to API development, database schema design, frontend design, and troubleshooting. Beyond technical proficiency, I have successfully navigated the challenges of solo freelancing, effectively balancing work commitments with ongoing learning to further enhance my skills.

WORK EXPERIENCE

Jan 2023 - Present
Brainkets | Tyre - Lebanon Ein baal

Software Developer

As a Full Stack Software Developer at Brainkets, I specialized in building user-friendly admin dashboards in Yii2. These dashboards provided clients with a simple and efficient way to oversee their whole website. I was responsible for ensuring that these interfaces were intuitive and easy to use.

In the back end, I leveraged the Yii2 framework or Express.js to create APIs that facilitated seamless data flow within the system. This allowed for dynamic content updates and smooth interactions on the websites. Additionally, I designed and maintained the database schema to ensure data organization and accessibility.

On the frontend, I used React.js and jQuery to develop visually appealing and user-friendly interfaces. These designs combined aesthetics with functionality, enhancing the overall user experience. My focus was on creating engaging and intuitive frontends that left a lasting impression on website visitors.

Furthermore, I played a key role in fixing bugs and improving older websites that had been created by other developers. I worked diligently to enhance their performance and functionality, ensuring they met client expectations.

As a Full Stack Software Developer at Brainkets, my role was diverse, encompassing admin dashboard development, API creation, database design, frontend development, and ongoing website maintenance and enhancement.

2020 - Present

Freelance

Full Stack Web Developer

Since February 2021, I've been freelancing as a solo developer. I specialized in creating websites using React.js and Express.js. I managed the entire website development process, from design to deployment and database setup, earning a solid reputation for my work and serving a growing clientele.

EDUCATION

Lebanese International University (LIU)

I'm currently in my third year of studying Computer Science with a GPA of 3.4. Alongside my coursework, I've worked as a software developer to maximize my coding expertise, striking a balance between academics and practical experience.

Online Courses

Since early 2020, I've pursued continuous self-improvement through online courses , covering topics like HTML, CSS, React.js, Express.js, algorithms and much more. I studied more than 11 courses and I'm committed to ongoing learning, always striving to be a better developer and staying updated on industry advancements.
